

CLR-111A Camera Link Repeater

The CLR-111A Camera Link Repeater is an economical approach for increasing separation between camera and frame grabber. One Camera Link cable pair connects the camera to the repeater, and a second cable pair connects the repeater to the frame grabber. This arrangement provides a 20 meter reach between camera and frame grabber using standard 10m Camera Link cables. Several repeaters and cable sets may be cascaded to support greater distances.

The CLR-111A supports all Camera Link configurations (base, medium, full) with pixel clock rates up-to 85 MHz and front-panel link status LEDs identify an active connection. The CLR-111A also supports 80-bit extended-mode applications.

The CLR-111A Camera Link Repeater is housed in a sturdy, compact aluminum enclosure and is well suited for industrial environments.
